

Letters to the Editor ...

Australia: Humanity's Cradle?

I just wanted to know what my fellow NEXUS readers think in relation to this one theory I have.

Australia is one of the oldest continents in the world, with the world's oldest living surviving culture of people: the Australian indigenous people, who have paintings that date as far back as 40,000 years. I put the following questions to readers of NEXUS and also members of the scientific community.

Firstly: why is there still a theory in use today that Australian Aboriginal people came from Asia, even though no archaeological evidence exists in other parts of Asia that would corroborate this theory?

And secondly: is it possible that because Australian Aboriginal culture is the oldest surviving culture on Earth—and coupled with the fact that Australia is now populated with every race of people from all corners of the globe and has every climate on Earth in its boundaries (i.e., tropical and subtropical in the north of Australia, snow in the southeast corner of the continent, Mediterranean and subterranean in South Australia and Western Australia and desert in 90 per cent of the country), plus the fact that the land is under the heavenly body, the Southern Cross—could Australia in theological and philosophical terms be playing a major part in the enlightenment and betterment of mankind at the dawn of the Age of Aquarius?

By writing the above, I do not wish to offend and/or insult other cultures and people of the world but just want an opinion on this theory, however far-fetched. If you would like to respond to this, emails can be sent to: blackstareagle@hotmail.com. Thank you.

Ben Rankins, Australia

Frontier Psychiatry Warning

Dear Duncan: We read with great interest the article, "A Nutritional Approach to Treating ADHD", in the Oct–Nov 2001 issue [8/06] of your magazine. The subject matter is something that we have completed quite a deal of research on. There is an equally disturbing matter which we would like to draw to your attention.

Are you familiar with projects EPPIC, PACE and NEPP*—the

recruitment of young people by social workers, school counsellors and the like for administering of neuroleptic drugs and the overall abuse of mentally ill people by the psychiatric profession? (* EPPIC: Early Psychosis Prevention and Intervention Centre; PACE: Personal Assistance and Crisis Evaluation; NEPP: National Early Psychosis Project)

Unsuspecting, emotionally disturbed young people are deemed mentally ill and they are treated with psychiatric drugs instead of being given counselling and rehabilitative treatment. They are locked in mental institutions and, without consent, exposed to chemical lobotomy or ECG as well as denied other basic human rights. The general public is not aware of these experiments.

One has to wonder about the high rate of suicide amongst our youth. Shame, shame, shame!

Bush Family Supported Hitler

Dear Duncan and NEXUS staff: Hi; hope you are all well and happy. I found this amazing info at Mr Jon Rappoport's fantastic site, nomorefakenews.com, and thought it would surely be of interest to NEXUS readers. It is a piece by Carla Binion from *Online Journal* of December 21, 2000, and states that:

"In [a] Simpson book, *The Splendid Blonde Beast*, the author wrote about George H. W. Bush's father, Prescott, and his maternal grandfather, George Herbert Walker. Both Bert Walker and Prescott Bush were powerful financial supporters of Adolf Hitler.

"Walker was president of Union Banking Corporation, a firm that traded with Germany and helped German industrialists consolidate Hitler's political power. Simpson says Union Banking became a Nazi money-laundering machine.

"Walker helped take over North American operations of Hamburg–Amerika Line, a shipping line and cover for I. G. Farben's Nazi espionage unit in the US. Hamburg–Amerika smuggled in German agents and brought in money for bribing American politicians to support Hitler. A 1934 congressional investigation showed

Hamburg–Amerika subsidized Nazi propaganda efforts in the US.

"George H. W. Bush's father, Prescott, was a board member of Union Banking. The US government investigated both Bert Walker and Prescott Bush, and under the Trading with the Enemy Act seized all shares of Union Banking, including shares held by Prescott Bush. The government held that 'huge sections of Prescott Bush's empire had been operated on behalf of Nazi Germany and had greatly assisted the German war effort'."

I always suspected those MFs to be Nazis, but to have it laid out like that so clearly is really creepy. Why have we heard nothing of this in the media? Ha! What a silly question. Keep up the struggle!

Love,

Kathryn (You'll never take me alive!) McCloghry, Australia, kathrynmccloghry@bigpond.com

Tesla's Longitudinal EM Waves

Dear NEXUS: I was interested by the mention of Tesla in the article by Gavin Dingley on ParaSETI/ET contact via subtle energies ["Harnessing the Universal Cosmic Energy", NEXUS 8/05–06], where Tesla was using a different type of radio than we use nowadays—i.e., using longitudinal electromagnetic waves instead of transverse waves.

I have something that ties into this. In an article I sent you some time ago, I described how to demonstrate the longitudinal wave nature of electromagnetic waves. The electronic device demonstrates an effect that Alexander Graham Bell showed.

An electronic device can be constructed, consisting of a photosensitive cell connected to a frequency-changing network connected to audio output speaker. The frequency changer is set to convert the frequencies at which light operates into audio sound level frequencies that the human ear is used to.

Once a light source is shone onto this device, sound comes out of it as light frequencies are converted into sound. The light source can be placed a very long distance away from the device and it still works.

The amazing feature is, if a sound is made at the light source, such as by a tuning fork or by someone speaking, then this sound is also

picked up by the device and comes out of the speaker. It does not seem to matter how far the sound source is away from the device: so long as it is between the path of the light source and the device, the sound is transmitted. (NB: the best light source is DC.)

Sound is a longitudinal wave, and so by its interaction with light it demonstrates that light has a longitudinal wave effect.

I have been looking into this sort of thing for some time now. If you are interested in a longer account of how this electromagnetic effect sits in with other things I have researched, then see below. Thanks.

Secret Tunnels in Australia

Dear Duncan: I was interested to read the article on underwater bases and tunnels in the vol. 8, no. 5 issue. On a similar theme, a colleague of mine related the story of how he stumbled on something unusual.

He and a mate were driving from Coonabarabran to Narrabri on the Newell Highway, New South Wales, about 20 years ago. About halfway between the two towns, they stopped the car to "answer the call of nature". The road was isolated in tree and scrub country, there being no town, settlement or homestead anywhere nearby.

They descended the bank from the road and saw an open manhole amongst the trees, half hidden in the dappled shade. They moved to investigate. The manhole cover was hinged open, its upper surface covered in camouflage bark. The access shaft it had concealed went a short distance down.

Curious, my colleague and his friend climbed down the ladder to a round well-lit tunnel. Its diameter was much taller than they and was perfectly straight, vanishing into the distance on either side of them. The walls were of finished concrete and rails were set into the floor, perhaps for a goods/ passenger vehicle of some type. The two men chose not to explore further.

This tunnel was obviously not some cramped serviceway for telecommunications conduits. It was meant as a transport corridor, and, given the remote location of

... more Letters to the Editor

NB: Please keep letters to approx. 150 to 250 words in length. Ed.

this access point and the vast distances this tunnel system would have to cover, it was built at great expense. The obvious questions are: who built it and why? Does it lead to a secret underground base that is hardened against nuclear attack?

How many such facilities might be hidden in Australia, an island continent known for its empty and untraveller spaces?

[Name withheld by request.]

Terrorism & the NWO Agenda

Dear Duncan: The tragedy of the recent attacks on the Pentagon and the World Trade Center buildings is different from what the "corrupt" media is making it out to be.

In mathematics, $2 + 2 = 4$. However, when it comes to all other matters, most people accept what the media are telling them, even though the facts do not add up.

In all legal matters, the first question that is normally asked is: what is the motive and who stands to benefit from the crime? In my opinion, it is crystal clear that the party(ies) benefiting from the terrorist crimes are the families that control the companies of the arms industry, who are also those of the banking sector and the media. Too much "education" may be a hindrance in understanding this.

Terrorist hijackers are pawns in the game (like the book), just like most people buying into the manipulations of the [New] World Order agenda from the corrupt media and politicians working against the US Constitution.

All hijackings which took place could not have happened without help from inside: US politicians swearing alliance to the Illuminati/World Order rather than the US Constitution?!

So, who are the real terrorists of this planet? And how interesting it is to hear a comment such as that made by George Bush, that the US is the beacon of light for the world. Which world is he talking about, and why would he use this phrase? How come the Statue of Liberty was not attacked, and what does the illuminating torch/flame stand for?

The scariest part of everything I have been talking about is not what

took place in New York and DC, but the fact that, as long as we buy into the lies of government and media, what has happened is just the beginning of high-financed terrorism by the "elite".

I hope that most Americans will wake up in time to see what was once a land of the free is no longer so. If the US falls, the rest of the "free" world falls.

Sincerely, from Canada, a reader that appreciates your magazine. A toast to freedom!

Australian Free Energy Device

Dear Duncan: I know NEXUS has published many articles on free energy, but one I have been chasing up involves a generator invented by two Australians. It was demonstrated on TV—Channel 7's *Today Tonight* program—and written up in the *Cairns Post* on March 7, 2001. So far, I have seen no other mention of it but have been able to collect quite a lot of information.

The inventors, John Christie and Lou Brits, need A\$500,000 to build a plant in Cairns to develop their invention, but, as the US, Japan, China and Indonesia are all very interested, it would be a catastrophe if this self-powering unit were sold only overseas. We have thousands of places in Australia which could use this alternative source of energy; e.g., outback homesteads miles from power lines having to use oil or gas which is fast becoming too expensive to buy.

The generator runs virtually on perpetual motion, using magnets and a battery to kick-start it, and can produce enough electricity to power an entire house. The units could sell for from \$4,000 to \$5,000 and are transportable. Hope you can find space to do an article on it.

Good luck, and keep up the good work.

Yours sincerely,
Shirley Campisi

[Dear Shirley: My opinion, after speaking to other researchers in this field including Robert Adams, is that the device created by Christie and Brits, which does work as claimed, appears to be very similar to the Adams Pulsed Electric Motor Generator. If this is true, then they may have some

trouble obtaining patents, as the Adams Motor information was put into the public domain by Robert Adams through NEXUS Magazine back in 1992. If they fail to obtain a patent, then it will be difficult to obtain large-scale funding, etc. I just hope they, and others, continue to succeed in their endeavours and that one day we'll all be using such devices. Ed.]

An Ioniser that Really Works!

Dear Sir: I just wanted to write to you and let you know how pleased I am with one of the products advertised in NEXUS. I have collected a museum of ionisers and ozonators over the last 15 years and the *Elanra* is the best I have ever owned.

I have had problems breathing in the past, and air quality is very important to me. The *Elanra* is so far superior to every other ioniser on the market. I know, because I have owned every major brand and several MLM models. The price at first seemed expensive. As always, you get what you pay for. I brought three to four US\$100–\$300 [major brand] models and sent all of them back because they didn't do what they were claimed to do.

I knew within 24 hours of buying the *Elanra* that it was the best ioniser I had ever owned. I also started to wonder, after about three days of using the *Elanra*, whether all the other products were actually ionisers.

Thank you,
Scott McCall, Longmont,
Colorado, USA

Spontaneous Combustion

People sometimes burn to death in the most extraordinary circumstances. Over the last 400 years, more than 200 people have burst into flames for reasons which have yet to be explained.

Contemporary reports all describe bodies totally consumed but arms and legs still intact, furniture close to the remains showing no signs of fire damage and a pink deposit found on light bulbs or similar shiny surfaces. The events usually take place at night, so eyewitnesses are few but they all speak of flames bursting forcefully outward from the body. Many people believe

these happenings must be examples of spontaneous human combustion.

I am investigating this mysterious phenomenon and invite correspondence from anyone who has personal experience of such events, especially those in Australia. A phone number/ address/email would be helpful, but anonymity is guaranteed if required. Many thanks.

Health Concerns over GE Soy

Hi, NEXUS: I've just started reading Letters to the Editor, Oct–Nov 2001 issue [8/06], and thought I should write.

I have spent years in bed with ME or chronic fatigue syndrome. I have since found out that ME is really a strain of polio, and people can go down when their immune system is lowered—in my case, by sprays.

Now that I have some energy, I get very angry at the way farmers in this "clean, green" country spray family, friends, neighbours, animals, insects, birds and water life. They make Adolf Hitler look like an eco-friendly gentleman. Commonsense would tell you that these toxic chemicals in small doses must harm our bodies.

When I first got sick 16 years ago, I felt better eating sardines. Nowadays, if I eat sardines in soya oil I get a "dead" feeling. The same thing happened when I used some non-organic soya sauce and I realised that it is because it is now genetically engineered. I don't have to read about unknown effects: I know it's bad for you.

I have read the book *None Dare Call It Conspiracy* and realise that GE is just phase two of the insiders' efforts to reduce the population so they can take over the world. This book has changed the whole way I see the news.

The Arabs have said for years that astronauts never landed on the Moon and that the US is the Antichrist. The Bible says "whole nations will be deceived". I realise it's right, and not just about religion.

Pamela Mander
